Gravity Inductor & Pump Packages for 400 lb Drum

PumpMaster 45 & 35 grease pumps mounted onto a gravity fed follower plate and an air operated pump lift for use with 400 lb drums.

The air operated pump lift makes drum changes easier, faster, and safer. The pump lower end is rigidly fixed to a follower plate with a single rubber wiper. The weight of the pump, pump bracket and follower plate plus the atmospheric pressure push the assembly against the grease eliminating channeling and air pockets, keeping lubricant free from contaminants, minimizing waste and aiding pump priming.

Inductor packages include pump, air and grease connection hose kit, pump with follower plate, and pump adaptor kit.

Manual: SM 853827
