

Power Ram & Pump Packages for 400 lb Drums

PumpMaster 45 and PumpMaster 60 grease pumps mounted onto an air operated power ram with a double lip follower plate for use with high viscosity, hard to pump greases directly from 400 lb drums.

The double lip follower plate is attached to the lower end of the pump tube, and it exerts weight, pneumatic and atmospheric pressure on the material forcing pump priming. The follower plate also serves as protection against contaminants and eliminates material waste.

Automatic Power Ram

- On/Off control of the pump
- Up/Down control of the ram for easy drum exchange
- Two independent air pressure regulators, one for the pump and one for the power ram cylinders
- Pump / Ram independent air pressure gauge
- Automatic empty drum pump shut-off safety feature
- Automatic vacuum release
- Pump air connection accessories
